Introduction

The CSU has published graduation and continuation rates for bachelor's degree seekers since May 1979. The earliest rates were distributed as thematic reports under the title *Those Who Stay*. A partial listing of those historical rates is reprinted each year in the *CSU Statistical Abstract*. Pages 227-231 of the July 2004 edition *Statistical Abstract*, for example, lists graduation and continuation rates for first-time undergraduates and undergraduate transfers that entered the CSU between fall 1975 and fall 1998. The abstract reveals the gradual increase in completion rates that has taken place over the past 30 years for most CSU undergraduates. They also bring to light the overall rise in time-to-degree. Between fall 1975 and fall 1985, there was a noticeable decline in the number of newcomers that completed their degrees within five years of their start date. Unfortunately, many outside observers now tend to ignore the graduation and continuation rates posted in the *Abstract* because the rates do not conform exactly to recently established federal definitions.

In 1997, the National Center for Education Statistics (NCES) developed the Graduation Rate Survey (GRS) within the Integrated Postsecondary Education Data System (IPEDS) to facilitate compliance with some of the reporting requirements for the Student Right-To-Know and Campus Security Act (Public Law 101-542). The survey specified which students should be tracked, defined how graduation rates should be calculated, and indicated the time-intervals at which rates should be reported. The first official IPEDS-GRS administration for institutions whose longest baccalaureate program is four years was completed in spring 2002; the first certified IPEDS-GRS administration was completed in 2003. The certified information that was collected represented students who entered a four-year institution in the 1996-97 academic year. When the graduation results for the 1996-97 students were released by NCES to the public, the IPEDS-GRS rates became the unanimous preferred metric.

The obvious upside of using rates derived from the IPEDS-GRS is that they represent a standardized methodology that makes valid inter-campus comparisons possible. But one definite downside is that there are no reference points from previous decades. This report represents a first attempt at providing historical graduation and continuation rates for CSU undergraduates based on the IPEDS-GRS methodology. The results were derived from the official enrollment and graduation records for undergraduate cohorts that entered the CSU in either fall 1975 (N=22,011), fall 1985 (N=24,385), or fall 1995 (N=25,631). Separate rates are presented for each CSU campus and the CSU System (i.e., the sum of all campus events).

The IPEDS-GRS methodology restricts graduation rates to new first-time, degree-seeking undergraduates that were enrolled full-time during their first academic term; and they limit the observation period to six years. They also limit graduation events to degrees awarded by a cohort's origin campus (i.e., degrees earned at another campus after transferring are disregarded). The first set of rates that is presented reflects these guidelines. So each campus-specific table labeled "1" displays 4-, 5-, and 6-year graduation rates that are comparable to the 4-, 5-, and 6-year graduation rates that are posted by NCES at its IPEDS COOL WEBSITE (<http://nces.ed.gov/ipeds/cool/>).

As everyone should know, IPEDS-GRS graduation rates do not necessarily capture all the observed graduation events documented by a campus. In the case of most CSU campuses, the primary omissions have been the recorded graduates that completed their baccalaureate programs more than six years after matriculation. Most new CSU first-time undergraduates attempt full-time unit-loads in their first term (around 93%); but many of the initial full-timers change to part-timers soon after their first term. By the end of their academic careers, around 20 percent of CSU first-time, full-time undergraduates average fewer than 12 units per term. The minimum time-to-degree for most of that one-fifth is, of course, higher than the 6-year limit imposed by the IPEDS-GRS guidelines. For example, part-time students that average 6-9 units per semester need 7-10 years of continuous enrollment to complete most bachelor's degree program. To fully detect degrees conferred to new undergraduates that began as full-timers but became part-timers, the observation period for this report was extended from six years to 12 years.

The other significant omissions have been the degrees conferred to students that transferred from one CSU campus to another CSU campus. To capture these completions a complimentary graduation-rate table (labeled "2") was constructed for each campus. In those tables, the numerator for each rate equals the number of degrees at a cohort's origin campus plus the number of degrees awarded at another CSU campuses for those students that became intra-system transfers.

To illustrate what is reported herein, let's first look at systemwide graduation and continuation rates for the fall 1985 cohort (see pages 6-8). Table 1.0 indicates that the 6-year graduation rate, as defined by IPEDS-GRS, was 0.379, or 37.9 percent. The 12-year rate from the same table is 0.488, or 48.8 percent. So looking beyond six years adds 10.9 percentage points to the official IPEDS-GRS completion rate. The 12-year graduation rate listed in table 2.0 was 0.557 or 55.7 percent. So, in this instance, taking into account student movement within the system adds another 6.9 percentage points to the official IPEDS-GRS completion rate.

The cohort-specific cumulative graduation rates displayed in table 1.0 and table 2.0 are charted in figure 1.0 and figure 2.0, respectively (only observed rates are plotted). So each set of plotted lines summarizes the observed differences found among the three groups. The substantive findings are that the fall 1985 cohort shows about a 10 percentage-point increase in graduation events over the fall 1975 cohort; and the graduation rates for the fall 1995 cohort at the 10-year interval already exceed the graduation rates for the fall 1985 cohort at the 12-year interval. Extrapolation results suggest that two more years of data will produce a total gain of about 2 percentage points by the fall 1995 cohort over the fall 1985 cohort.

The next two displays for the system, tables 3.0 and 4.0, present the continuation rates for each cohort. The former table includes students that were still enrolled at their origin campus; the latter table includes students that were still enrolled at either their origin campus or another CSU campus. So the 6-year continuation rate for the fall 1985 cohort posted in table 3.0 indicates that 10.7 percent of the group was still enrolled at the CSU in fall 2001, or still enrolled after six years had elapsed since their start date. The comparable 6-year figure in table 4.0 is 18.8 percent.

The last indicator provided for each cohort is the measure of time-to-degree; that is, the average difference, in years, between students' start dates and degree conferred dates. The averages were derived from the single-year distribution of graduation rates (p_i), generated from the differences between two adjacent cumulative graduation rates (i.e., each p_i value equals $cp_i - cp_{i-1}$). Because most CSU degrees are conferred in the spring term, the following expression was found to be the best formula for estimating the average time to degree:

$$\sum_{i=1}^n p_i (X_{i-1} + 0.75)$$

If CSU degrees were conferred uniformly across the college year, the constant in the above expression would equal 0.50.

In substantive terms, the average time-to-degree did vary some. The averages found among the fall 1985 cohort were nearly a semester longer than the averages found among the fall 1975 cohort. Differences in time-to-degree between the fall 1985 and fall 1995 cohorts, however, were negligible. Perhaps the most important finding is the most basic finding: during the entire breadth of 30-year observation period, the time-to-degree averages for the CSU System were never less than 5 years (5.1 to 5.5 years). Moreover, the fifth year was the modal year of completion for each cohort. So those bemoaning the scarcity of 4-year degree completers at the CSU found in the initial four IPEDS-GRS collections are in fact lamenting a very long-standing condition.

The pervasiveness of the 5-year bachelor's degree certainly is not a phenomenon unique to the CSU. After investigating 11-year and 12-year longitudinal transcript-data for two national cohorts of high school graduates, Clifford Adelman concluded that the 5-year bachelor's degree has been the national norm since the 1970s (*Answers in the Tool Box*, US Dept. of Ed., 1999; p. 117). And like the CSU data, the national data revealed that students from the 1980s took a bit longer to complete a baccalaureate than students from the 1970s.

Campus Reports

Between fall 1975 and fall 1985 the CSU System consisted of 19 campuses. There is full reporting on all three cohorts for these campuses. During the early 1990s, the CSU System expanded with the addition of the San Marcos and Monterey Bay campuses. Historical results for these two campuses are limited to just the fall 1995 cohort. The CSU System's two youngest campuses, Maritime Academy and Channel Islands, are not part of the report because their data collection began after fall 1995.

At the time of analysis, the tracking-period for the fall 1995 cohort spanned only ten years. So where necessary, campus-specific estimates of 11-year and 12-year rates were extrapolated from the observed data on hand. In short, the estimates were based on the campus-specific 10-year-continuation rate for the fall 1995 cohort and the corresponding probabilities associated with either graduating or re-enrolling during either the 11th or 12th year, as exhibited by the older cohorts. The average time-to-degree reported for members of the fall 1995 cohort take into account the extrapolated graduation rates.

The 6-year and 12-year graduation rates plus the 6-year continuation rate for each campus are summarized in appendix tables A1-A6. Here, for example, you can see that 6-year IPEDS graduation rate varied by campus from 18.6 percent to 52.9 percent for the 1995 cohort varied (see table A1); and the corresponding 12-year graduation rate varied by campus from 40.2 percent to 73.8 percent (see table A3). You can also see that the average time-to-degree for the fall 1995 cohort ranged from 5.0 to 6.1 years across the campuses (see tables A7 and A8).

Comparisons across the cohorts indicate widespread campus improvements during the 30-year observation period. For example, fully 18 of the 19 campuses observed at the beginning of the period showed improved 12-year graduation rates when comparing the 1975 cohort with the 1985 cohort; and 13 of 19 campuses showed improved rates when comparing the 1985 cohort with the 1995 cohort. Overall, each campus showed a higher 12-year graduation rate for its fall 1995 cohort than its 1975 cohort.

Rates: Yesterday and Today

All the campus-specific CSU graduation rates from the four administrations of IPEDS-GRS that have taken place so far are posted at:

<http://www.asd.calstate.edu/csrde/index.shtml>.

From the start, the official 6-year IPEDS graduation rate for the CSU System has inched upward each year. The rate for the fall 1995 cohort was 0.379; the rates since then have been: 0.416, 0.437, 0.449, and 0.461. So each of the latest cohorts to be tracked exhibit even greater gains in bachelor’s degree completion over the two historical cohorts from the two prior decades than the gains associated with the fall 1995 cohort. For example, the ultimate proportion of graduates that is expected to eventually emerge from the fall 1999 cohort maybe as many as 14 percentage-points higher than the comparable rate for the fall 1975 cohort and roughly 6 percentage points higher than the fall 1985 cohort (see figure A, where the sum of the stacked columns for the last three cohorts signify the assumption that those still enrolled at the 6-year mark will in time graduate).

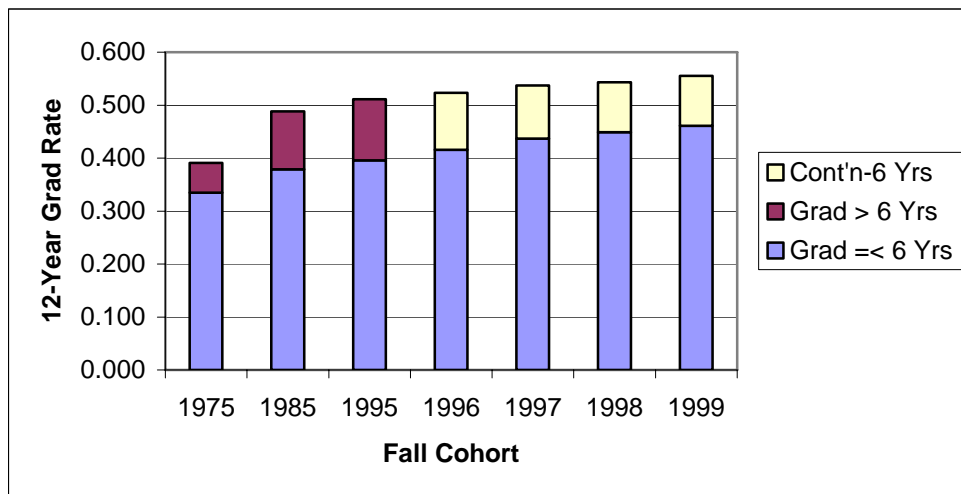

Figure A. IPEDS-GRS Graduation Rates by Elapsed Time for Selected CSU Cohorts

The stacked columns in figure A illustrate that most new first-time, full-time undergraduates attain their bachelor’s degrees in six years or less. The columns in figure B (see below) quantify the proportion that will graduate in six years or less for the three historical cohorts and the three official IPEDS cohorts. The most recent proportions hover around 80 percent.

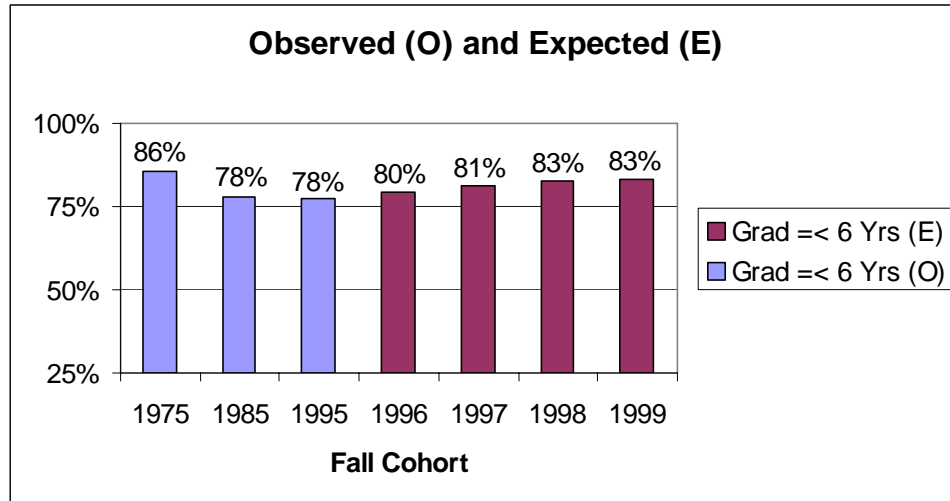

Figure B. Percentage that Graduated in 6 Years or Less for Selected CSU Cohorts

Background Data

The report ends with a series of appendix tables that list contextual information about each CSU campus. Table B1 lists re-centered SAT-I composite scores and table B3 lists the proportion of freshman class that met all the eligibility criteria for admission. Both characteristics are positively correlated with 12-year graduation rates.

Appendix table B2 lists the percentage of the total freshman cohort at each campus that was captured by the IPEDS requirement for inclusion: full-time status in the first term of enrollment. The percentages ranged from 78.9 to 98.8 percent. Finally, Appendix table B4 lists the cohort sizes for each campus. The average was 1,220, ranging from 169 to 3,095.

Table B2
Percent of Total Cohort that Was Full-time at Entry For Selected CSU Cohorts
(First-Time Freshmen)

Campus	Fall Cohort		
	1975	1985	1995
Bakersfield	93.5%	91.7%	94.3%
Chico	97.1%	96.4%	98.4%
Dominguez Hills	91.4%	90.7%	91.6%
East Bay (formerly Hayward)	89.2%	95.4%	92.5%
Fresno	94.4%	96.0%	97.4%
Fullerton	85.9%	86.9%	92.7%
Humboldt	94.9%	96.2%	98.1%
Long Beach	89.8%	85.7%	92.9%
Los Angeles	86.2%	93.1%	94.3%
Monterey Bay			98.8%
Northridge	88.8%	91.2%	95.0%
Pomona	86.2%	87.8%	90.1%
Sacramento	88.9%	93.1%	90.7%
San Bernardino	90.9%	93.2%	91.1%
San Diego	89.0%	79.2%	89.3%
San Francisco	87.7%	83.0%	91.2%
San Jose	89.3%	88.6%	91.9%
San Luis Obispo	96.2%	93.8%	96.4%
San Marcos			93.6%
Sonoma	90.7%	93.1%	97.3%
Stanislaus	86.2%	84.3%	81.9%
Systemwide	90.1%	88.7%	93.2%

Table B3
Percentage of Regular Admits For Selected CSU Cohorts
(First-Time, Full-Time Freshmen)

Campus	Fall Cohort		
	1975	1985	1995
Bakersfield	81.0%	73.4%	71.8%
Chico	87.4%	86.3%	84.6%
Dominguez Hills	61.5%	59.1%	70.2%
East Bay (formerly Hayward)	78.0%	78.0%	77.3%
Fresno	81.3%	82.8%	77.7%
Fullerton	94.4%	89.9%	88.4%
Humboldt	94.4%	78.4%	91.5%
Long Beach	82.4%	85.5%	78.2%
Los Angeles	56.8%	58.8%	68.6%
Monterey Bay			86.4%
Northridge	85.2%	85.1%	72.4%
Pomona	82.6%	86.2%	89.9%
Sacramento	91.0%	89.5%	74.5%
San Bernardino	77.7%	76.8%	67.5%
San Diego	93.1%	90.7%	87.2%
San Francisco	74.6%	71.4%	84.6%
San Jose	79.7%	87.8%	67.8%
San Luis Obispo	90.9%	91.0%	99.2%
San Marcos			84.0%
Sonoma	80.3%	70.7%	88.3%
Stanislaus	72.2%	80.5%	76.6%
Systemwide	83.8%	83.9%	81.8%

Table B4
Cohort Size For Selected CSU Cohorts
(First-Time, Full-Time Freshmen)

Campus	Fall Cohort		
	1975	1985	1995
Bakersfield	200	286	397
Chico	1,179	1,269	1,402
